ENTERPRISE GEORGIA

Who? The Export Development Department of Entrepreneurship Development Agency was set up

Why? For promotion of export of Georgian products

Where? Worldwide

The wide range of preferential trade agreements,

Rich diversity of high quality product,

As well as the liberal tax policy, allows international traders to benefit from

Doing business with Georgia.

Enjoying liberal trade regimes with half of the world, Georgia is a

WTO Member under MFN treatment from all member countries and is

In Free Trade Agreement with EU, CIS and Turkey.

The other natural advantage of Georgia is, that it is the

Hub for Europe, Asia, CIS – having excellent

Geo-Political and Geo-Strategic location.

EU imports Georgian product tax free under DCFTA trade agreement and

Over 3400 export products are within the US's GSP scheme.

Reduced cost of products due to tax free exports make Georgia a competitive trader.

GEORGIA OVERVIEW

- Free Trade Agreement
- GSP (Preferential terms of Trade)

Georgia – Member of WTO since 2000:
Most Favored Nation (MFN)

Located at the crossroads of Europe, Central Asia, Middle East and Africa, Georgia is the shortest transit route between Western Europe and Central Asia for transportation of oil and gas as well as dry cargo

Area:	69,700 sq km
Population (2013E):	4.5 mln
Life expectancy:	76 years
Official language:	Georgian
Literacy:	99.7%
Capital:	Tbilisi
Currency (code):	Lari (GEL)
GDP 2013:	US\$ 16.1 bln
GDP real growth rate 2013:	+3.3%*
GDP per capita 2013 PPP:	US\$ 7,176
FDI Inflows 2013:	US\$ 941.9 mln
Inflation rate (e-o-p) 2013:	2.4%
Unemployment Rate 2013	14.6%
Total Export 2014	US\$ 2.861 bln
Average GEL/USD 2014	1.76
Average GEL/EUR 2014	2.34

Georgia Has the Fourth Lowest Tax Burden Globally

Liberal Tax and Trade Policy

- Very simple and service oriented customs policy
- Average Customs Clearance ~15 minutes
- Efficient tax administration
- No quantitative restrictions or tariff barriers
- 0% customs tax on over 80% of imports
- 0% customs tax on all exports
- 0% VAT on all exports

Ongoing negotiations on Free Trade Agreement with the EFTA States (Switzerland, Norway, Iceland, Liechtenstein)

* The World Bank expects Georgia to have 5.5% economic growth in 2014

GEORGIAN EXPORT OVERVIEW

Since 2000, the export of goods and services in Georgia has increased about 10 times and reached \$2.91 billion and \$2.98 billion respectively in 2013. The export of services has also shown a positive trend since 2000, with an annual average growth rate of 18%. Herewith, over the last decade, Georgia has become a net exporter of services.

Over the past 14 years, the export of goods from Georgia has been growing at an annual average rate of 20%. However, due to various external factors in the region, there have been several downturns, followed by significant increases in the coming years.

In 2006, the slowdown was the result of the Russian embargo on Georgian products, which was followed by a 32% increase in 2007 due to the diversification of Georgian export markets. Another significant downturn appeared in 2009 after the Georgia-Russia War in 2008, which was followed by a 48% and 31% increase in 2010 and 211 respectively.

In 2014, the Ukraine crisis and Russian ruble devaluation have slowed Georgian export. However, the newly signed Deep and Comprehensive Free Trade Agreement (DCFTA) with the European Union is expected to foster the entrance of Georgian export-oriented companies into new markets and further diversify exports of goods and services.

In 2014, top three export countries account for almost 40% of Georgian export. The decrease of motor car (which make up 18% of Georgian export structure) exports to Azerbaijan was a result of changes in the country's import regulations regarding the vehicles. However, a major growth of industrial and value added agricultural products has further strengthened and enhanced positive tendencies observed over the years. Same trend applied to overall export to European Union.

The top export countries vary from year to year, which shows that Georgia has diversified its export markets. As such, the government of Georgia puts a lot of effort into supporting exporters expand their potential in new and existing markets.

Export of Goods and Services (\$ million' 2000-2014)

Georgian Mineral and Still Water

HS Code: 2201

Georgia is home to over 2,000 mineral water springs and several (Nabeghlavi, Sairme, Borjomi, etc.) are bottled for domestic consumption and export.

Georgian mineral waters have exceptional and interesting tastes - very different from the French and Italian varieties. The most famous Georgian mineral waters – Nabeghlavi, Sairme, Borjomi – are protected appellations of origin, but there are many lesser-known springs worth sampling located in small towns and alongside roads throughout the country.

Georgia's mineral springs were discovered over one-thousand years ago and the use of Georgian mineral water has been recommended by Georgian and foreign researchers for the complex treatment of several digestive diseases, as well as diabetes mellitus. Traditionally, Georgians consume sparkling mineral waters as an extremely effective antioxidant during food poisoning and especially as a natural hangover remedy. Despite the loss of its largest market-Russia (Embargo 2006-2013) Georgia quickly recovered and diversified water exports to up to 40 countries, including eleven countries where it remains to be the market leader. After the re-opening of the Russian market from 2014, exports spiked.

The mineral and still water sector in Georgia had an approximate output of GEL 245 million* (25.4 million dekaliters) in 2013.

In 2014, the export of Georgian mineral and still waters increased by 28% and reached \$137.1M. The major export destinations are Russia (48%), Ukraine (21%) and Kazakhstan (9%).

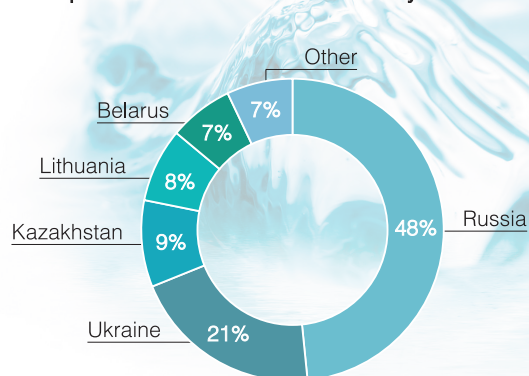

COMPETITIVE ADVANTAGES

- High Water quality
- Room for expansion (New springs available for bottling)
- National pride, part of the Georgian culture, tradition
- Certified curative properties
- Protected appellations of origin
- Vast export experience
- High recognition in former Soviet countries and rising popularity in US, UAE, EU

Georgian Tea

HS Code: 0902

Tea growing in Georgia first took place in the 1830s. In 1920 Georgian tea took on a new significance when tea-growing was recognized as a special area of economic activity. The Tea and Subtropical Cultures Research Institute was founded in Anaseuli, West Georgia, where new varieties of the tea were grown, focusing on tender shoots and special aromas. Georgia was the primary tea supplier for the former Soviet Union.

West Georgia's humid sub-tropical climate and mineral-rich soils contribute to the original taste and high quality of Georgian tea, and this is where tea plantations are mainly found. Tea leaves are picked 4-5 times per season (May – October). Georgian tea can compete on western markets with the likes of India or Sri-Lanka due to its fine quality and, in most cases, in savings on transportation. It is believed to have a unique taste, tender shoots and a special aroma, and is especially good for blending different types of tea leaves. Georgian green tea stands-out by its very interesting, strong taste.

In 2013, Georgian Tea had an approximate output of GEL 4.9 million (1.9 million tons), up 158% compared to 2012.

The main consumers of Georgian tea are Turkey (34%), Germany (18%), Mongolia (12%), and Ukraine (9%).

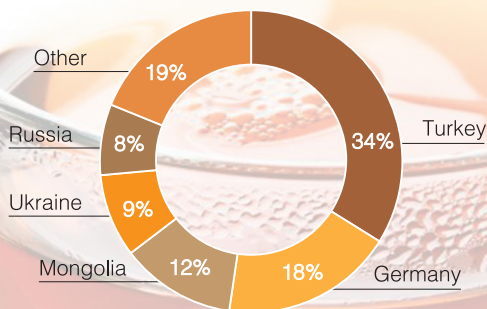

COMPETITIVE ADVANTAGES

- Rich tradition of tea production
- High-quality raw materials
- Advantageous price/quality correlation
- 0% entry tariff for Georgian tea in more than 50 countries
- High recognition in former soviet countires

Georgian Soft Drinks and Lemonades

HS Code: 2202

Soft drinks are very popular in Georgia, and beverages are an important part of Georgian culture and history. With genuine Georgian water taste, soft drinks are prepared using classic recipes and modern technology. Georgian soft drinks, which offer an unforgettable taste and flavor, meet all modern standards.

Georgian carbonated soft drinks – or lemonades, are flavored with cream, grape, peach, pear, lemon and tarragon. Tarragon (woodruff) is traditionally dyed green. Tarragon lemonade was invented in the 19th century by Georgian pharmacist Mitrofan Lagidze, who started adding carbonated water to his tarragon syrup mixes. It went into mass production in the Soviet Union in 1981 and gained exceptional popularity among all republics. Some exporters continue to produce naturally flavored lemonades (e.g. Lagi), with extracts from local herbs and fruits.

Today, there is tremendous expansion potential in the industry in Georgia. There are one billion potential customers within range in the Caucasus, the Black Sea region, Central Asia, the Balkans and the EU, and Georgia has beneficial trade regimes with most of these countries.

Soft Drinks and Lemonades in Georgia had an approximate output of GEL 197.6 million* (19.6 million dekaliters) in 2013, up 47% since 2010.

In 2014, the export of Georgian lemonades has increased by 65% and reached \$28.7 million. The major export destinations are Azerbaijan (35%), Kazakhstan (28%), and Russia (13%).

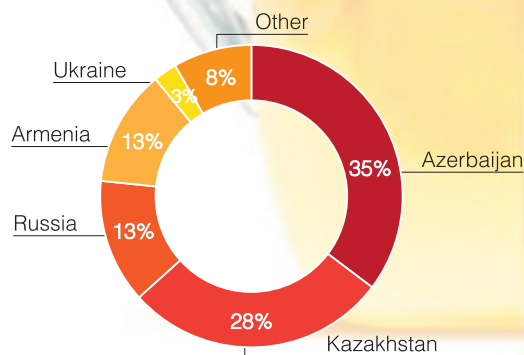

COMPETITIVE ADVANTAGES

- Long Tradition and Experience
- High capacity of expansion
- High quality water
- Extraordinary, original tastes
- Flavor-rich fruit concentrates
- Advanced technological production processes
- Attractive packaging

Oranges, apples, grapes and bananas are the most popular fruits in the world, and the first three of these are intensively grown in Georgia. A multitude of micro-climatic zones and a favorable natural environment have contributed to the commercialization of fruit production in Georgia since the early 1960s, and it has since become a significant export product. After the collapse of the Soviet Union, Georgian agriculture suffered a long recession, during which the majority of Georgian arable land was not cultivated and no chemical inputs were introduced. This made Georgian agriculture lands very attractive for bio-production the decades after.

Shida Kartli region in East Georgia is the most renowned for apple and pear orchards and the processing also takes place locally. Citruses grow on the subtropical coast of Black Sea in West Georgia. All large-scale juice producers here are equipped with modern technology production lines and meet international standards, which are necessary for the export to developed countries. Most juice producers started cultivating hundreds of hectares of own fruit orchards, preconditioning an even richer material base for increasing production capacity.

The unique taste and the high-quality of Georgian juices is preconditioned by local water and soil, which are rich in minerals.

The Juice sector in Georgia had an approximate output of GEL 14 million* (5500 Tones) in 2013, up 126% since 2010.

The export of Georgian Juice products in 2014 increased by 43% compared to 2013. The major export destinations of Georgian juices are the European Union and USA, which account for more than 50% of the total export.

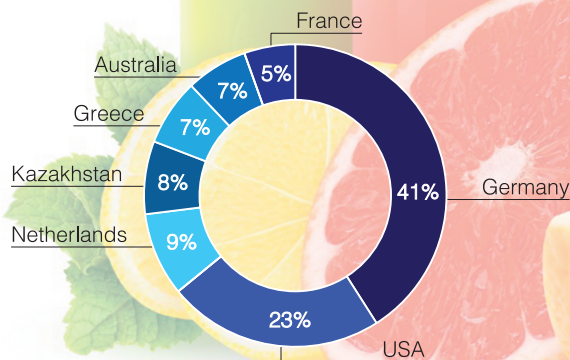

COMPETITIVE ADVANTAGES

- Diversity of fruit crops
- High quality, mineral rich water and soil
- Technologically well-equipped processing plants with high production capacity
- Locally produced fruits concentrates
- Reasonable price/quality correlation

Beer is a steadily growing segment in Georgia with high potential on both local and foreign markets. The taste and quality of Georgian water is the main distinguishing factor of Georgian beer as of a premium product. Vast investments have been made throughout the last two decades (Zedazeni, Castel, Efes) in the sector and the main players in this segment include Zedazeni Ltd, Kazbegi JSC, Lomisi (Natakhtari Brewery) JSC and Castel - Georgia Ltd. The main export destination countries for Georgian beer are Azerbaijan, Russia, Cyprus and Armenia.

Georgian beer had an approximate output of GEL 144.7 million (11.1 million dekaliters) in 2013, 56% up since 2010.

In 2014, the export of Georgian Beer has decreased by 45%, negative trend during the last two years is mainly the result of the changes in the Azerbaijan's import regulations regarding the beverages.

The major export destinations are Azerbaijan (49%), Russia (16%) and Cyprus (12%).

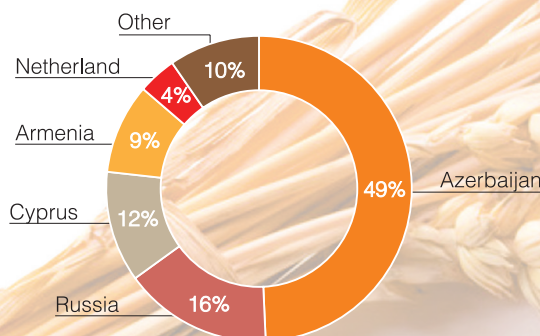

COMPETITIVE ADVANTAGES

- Unique Water Quality
- Advantageous price/quality correlation

Georgia, located at the crossroads of Europe and Asia, where wine is part the nation's cultural heritage rather than just an alcoholic beverage. Georgia is believed to have uninterrupted wine making history of eight millennia. The scientists have found and tested wine residues discovered on the inner surfaces of 8,000-year-old ceramic fermentation and storage jars, known as Qvevri.

The wine here is produced using modern European techniques, as well as using ancient Georgian traditional Qvevri wine making method which gained UNESCO status of Cultural Heritage Monument in 2012. These varied production styles contribute to a wide range of flavor profiles all produced from the same grape and appellation, resulting in a single variety having a greatly varied taste and quality.

Georgia has five distinct wine-producing regions: Kakheti, Kartli, Imereti, Racha-Lechkhumi and the Black Sea subtropical zone and is home to over 525 indigenous grape varieties, of which, about 45 are in commercial production. Today 18 Georgian wines have protected appellations of origin.

There are about 180 wine companies functioning in the country, and 94 of these are engaged in export activities. The key industry players are export-oriented and their export activities reach 80-95% of total production. Russia was the largest importer of Georgian wines until its embargo on Georgian food and beverages (2006-2012). Nevertheless, Georgia began to diversify its export markets and exports grew to the pre-embargo numbers even before the embargo was lifted.

At present, most of the companies are well equipped with up-to-date production facilities and ISO/HACCP certifications and there are advanced, accredited laboratories to maintain the necessary quality control. Number of wineries also started production of Bio certified wines.

The wine sector in Georgia had an approximate output of GEL 241.3 million* (5.1 million dekaliters) in 2013, up 85% compared to 2012.

In 2014, the export of Georgian Wine increased by 41% over 2013 and reached US \$182.6M. The major export destinations were Russia (61%), Ukraine (11%) and Kazakhstan (9%). Although, after enforcement of Deep and Comprehensive Free Trade (DCFTA) agreement with EU and consequent elimination of trade barriers in 2014, exports are expected to grow to European Union.

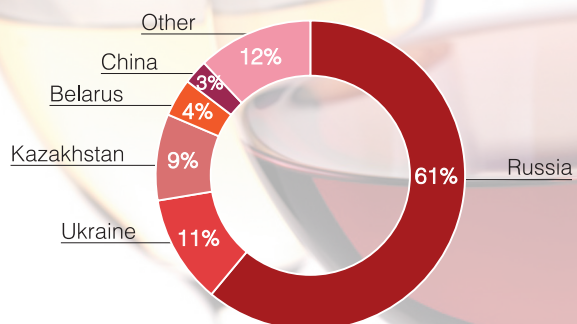

COMPETITIVE ADVANTAGES

- Unique grape varieties
- Longest tradition of wine making
- High-quality raw materials
- Advantageous price/quality correlation
- A stable and growing economy
- 0% entry tariff for Georgian wine in more than 50 countries

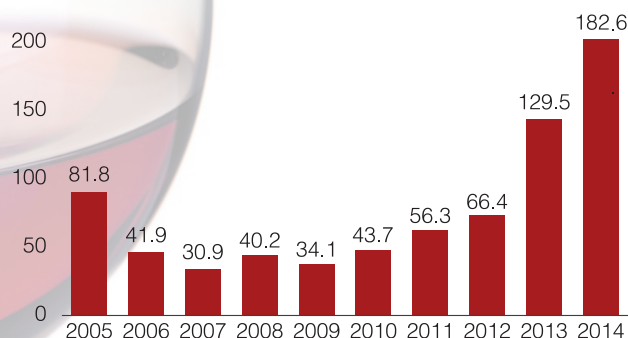

GEORGIA AS A TRADING PARTNER

Export of Wine, US\$'M

*2013: Average GEL/US\$: 1.66;

Georgia is renowned for its high-quality wines made from unique grape varieties and its use of various traditional technologies for making brandy and other wine distillations. There are specific types of Georgian grapes that are ideal for the spirits used in production of brandy: Tsitska, Tsolikauri, Rqatsiteli, Mtsvane, and Chinuri. It has been shown that they are very similar to the French grapes that are used for the production of Cognac and therefore produce a high-quality brandy.

The main market players in the Georgian brandy industry are few, but they are utilizing high-quality equipment and possess long-term experience and traditions. The companies have given their products the French classification of brandy VS, VSOP, XO, thus maintaining its quality standards to those of French Cognac.

Georgia has its own traditional technology of distillation of spirits from grape pomace (material left after the production of wine) called Chacha. Georgian Chacha is a Geographical Indication (GI) similarly to the Italian Grappa, Spanish Orujo, French Marc and the like. The production of this type of spirit is also practiced using figs, tangerines, and oranges. Chacha is renowned as being a homemade product that was made throughout the centuries in Georgia, and only recently have wine companies started factory production. Nevertheless, commercially produced Georgian Chacha brought multiple international awards in recent years and became popular in many export markets.

The spirits in Georgia are distilled using modern equipment and multiple filtration systems. Strict quality and laboratory control is carried out at all production stages, both in blending-production and the bottling process. The companies are using raw material including wheat, bread, maize and oats. There are only few companies in the sector, such as Ushba Distillery and Gomi, which concentrate solely on vodka production.

The Brandy and Spirits sector in Georgia had an approximate output of GEL 73.3 million (0.9 million dekaliters) in 2013, up 108% since 2010.

In 2014, the export of Georgian Brandy and Spirits decreased by 5% (mainly due to the crisis in the region) and reached US\$95.2 million. The major export destinations were Ukraine (25%), Russia (18%) and the Netherlands (13%).

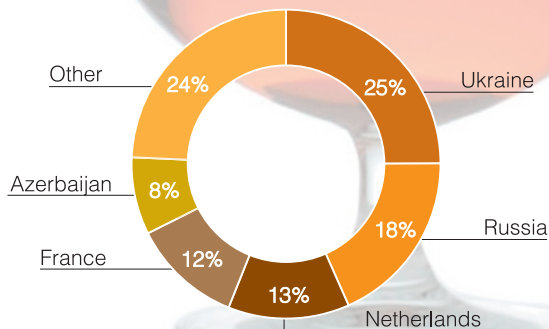

COMPETITIVE ADVANTAGES

- Unique grape varieties
- Longest tradition of making brandy and spirits
- Advanced technological production process and attractive packaging
- High-quality raw materials
- Advantageous price/quality correlation
- A stable and growing economy
- 0% import tariff in more than 50 countries

Georgia is the second largest exporter of processed hazelnuts, next to the world leader Turkey. Western part of the country has been traditional production area for nuts. Six types of naturally grown nuts are cultivated in Georgia on 1500-1800 meter altitude: 1. Corylusavellana; 2.Coryluscolumna; 3.Corylus pointica; 4.Corylus imeretina; 5.Corylus colchica; 6. Coryluscachetica. Due to a powerful root system of local varieties, very limited amount of fertilizers are applied and many producers even started conversion to Bio. Hazelnut diseases are very rare and pesticides are also used in very moderate amounts.

Regions of Samegrelo and Guria in West Georgia and Kakheti in East Georgia are the most renowned for its hazelnut cropping, and processing also takes place locally with most of the producers possessing ISO/HACCP certificates.

The Hazelnut sector in Georgia had an approximate output of GEL 250 million* (27,708 Tons) in 2013.

The export of Georgian hazelnuts in 2014 demonstrated a 10% growth compared to 2013 and 45% growth compared to 2012. Hazelnuts are the number one agriculture export product in Georgia, and currently 95% of the total share is exported. EU accounts for 75% of Georgia's hazelnut exports, followed by CIS.

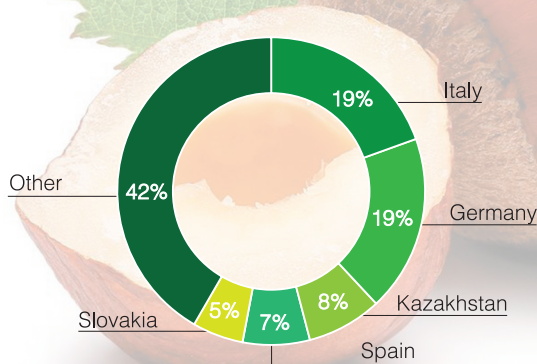

COMPETITIVE ADVANTAGES

- High quality crops due to climate and mineralization
- Long tradition and experience
- Competitive price on processed product due to low processing costs in Georgia
- Cost/quality advantage due to favorable natural conditions
- Advanced technological production process
- Vast Export Experience

Georgia's diversified landscape of low and high altitudes - from Black Sea coast to ice picks of Greater Caucasus range provide opportunities for production of multitude of agricultural products. Georgia has world famous and rich flavored cuisine renown for its unique taste and authenticity. On the path to rising competitiveness at global food and beverage markets, Georgia registered up to 40 geographic indications and appellations of origin, including wines, spirits, mineral waters, dairy products and traditional delicacies.

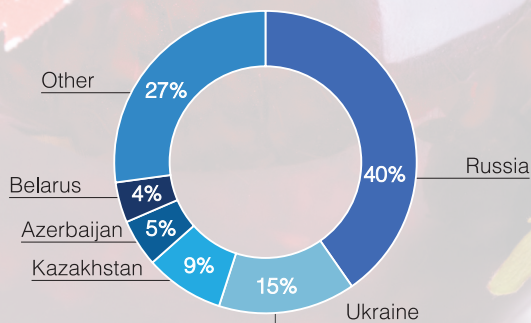

Georgian food processing can be divided into two main groups. The first group is represented by products, which mainly consume domestic resources and are oriented towards exports (wine and grape spirits, tea, canned food, essential oils, tobacco products, bottled mineral water). The second group on the other hand, uses imported inputs/products and mainly supplies domestic market (milk and dairy products, meat and ham, fish, sugar, oil, fat, pasta, beer and non-alcoholic drinks).

Since 2009, export of foodstuffs has been growing with an average rate of about 30% and in 2014 the value reached \$501 million – up 24% compared to 2013. The main export markets for Georgian foodstuffs are Russia (40%) Ukraine (15%) and Kazakhstan (9%).

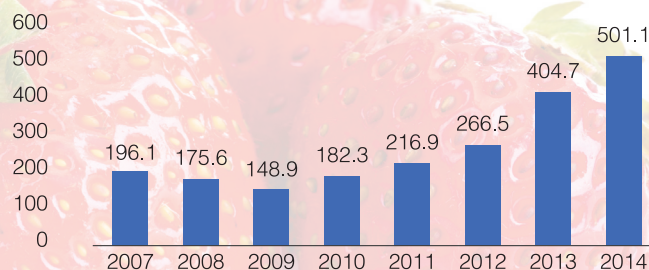

COMPETITIVE ADVANTAGES

- High-quality raw materials
- Advantageous price/quality correlation
- A stable and growing economy
- Free trade agreements with EU, Turkey and CIS

Georgian Pharmaceutical Industry

HS Code: 3004

Since 1930s, Georgia has been a leader in production of bacteriophages, Phages were discovered to be antibacterial agents and first were used in Georgia and the United States during the 1930s for treating bacterial infections. Development of phages in Georgia hindered, as a result of the political and economic transition and lack of funding. However, with the rise of drug resistant strains of bacteria, potential role of phages is garnering new attention in the West. Currently there are 3 companies focusing on phages production in Georgia.

Collection of herbs and medicinal plants for home consumption and resale is a common practice in Georgia. There are 45 varieties of medicinal herbs and berries growing wild in high mountainous regions, (mostly in Guria, Adjara Imereti and Samtskhe-Javakheti) out of which, twenty two types are being collected and Only four of them account for about 80% of the total tonnage collected (Eucalyptus, Bilberry, Dwarf Everlast Flower and Rosehip). However, cultivation of Licorice Roots are significantly increasing during the last couple of years.

The local pharmaceutical manufacturing sector in Georgia consists of 70 producers, of which GMP and Aversi Rational represent a share of almost 90%. Aversi and GMP are also the largest companies in the import and distribution sector where they have a joint share of 48%.

Local manufacturing has been growing rapidly at an average rate of about 46% per year from 2005 to 2014. In 2013, the value of local production was GEL 96.5 million* in 2013, up 147% since 2006.

Over the last decade pharmaceutical industry in Georgia has been experiencing a double digit export growth and has grown at an annual rate of 48% from 2005 to 2014. Georgia exports pharmaceuticals to about 40 countries and in 2014 exports reached \$92.1 million, 75% up compared to 2013.

The top consumer of Georgian produced pharmaceutical products are Uzbekistan (47%), Azerbaijan (30%) and Armenia (5%).

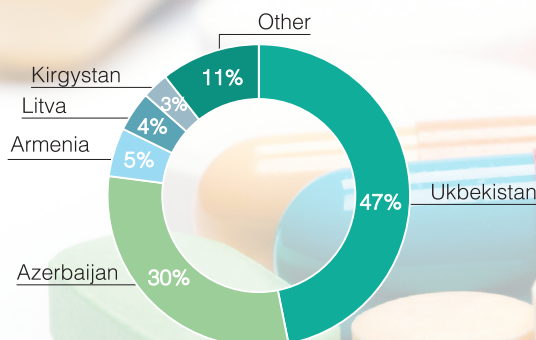

COMPETITIVE ADVANTAGES

- No pricing regulations on pharmaceuticals
- No VAT on Pharmaceuticals
- Rich material base for herbal medicine
- Producers with high technology lines
- Very low per capital consumption of pharmaceuticals (room for expansion)

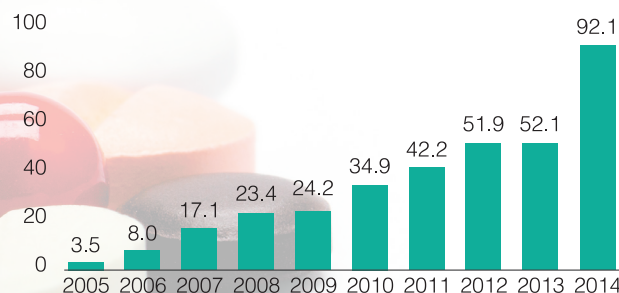

GEORGIA AS A TRADING PARTNER

- **There is a 0% entry tariff** – CIS countries, European Union, Turkey, Singapore, Hong Kong, Kiribati, Macao, Ukraine, USA, Bahrain, Kuwait, New Zealand, Qatar, Saudi Arabia, United Arab Emirates, Panama, Iceland, Haiti, Honduras and Albania

Georgian Apparel and Shoes Industry

HS Codes: 6101-6409

Organized apparel manufacturing in Georgia dates back to the beginning of 20th century. Under the Soviet Union Georgia was well known for its high quality silk and wool blend fabrics. The Industry collapsed after the breakdown of the Soviet Union in early 1990s and re-emerged in 2004. Attracted by its skilled and low-cost labor, cheap land, low energy costs and preferential access to the EU market, several European brands outsourced their production to Georgia and some Turkish companies established plants in the Adjara region, at the border with Turkey.

Major brands such as Moncler, Tommy Hilfiger, Zara, Marks & Spencer, Koton, Puma, Mexx, Next, Etam, Lotto, Per Una, Autograph, Lebek, Hawes & Curtis, Roberto Cavalli now produce apparel in Georgia, thus promoting the “Made in Georgia” label.

The textile sector now consists of about 200 companies, 95% of which are micro-enterprises, while 5 large Turkish companies and 12 Georgian manufacturers operate. The transition from the GSP+ to the DCFTA trade regime with the EU is expected to further stimulate the development of the industry.

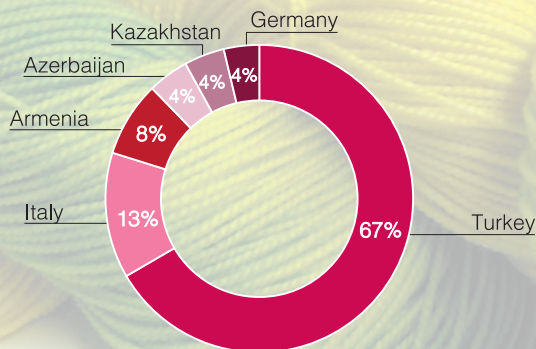

The export of Georgian Apparel and Shoes increased by 48% and reached \$93.8 million in 2014. The main export product in apparel industry is T-shirts and other vests, knitted or crocheted (HS: 6109) with 40% share of all export.

The main export markets for Georgian Apparel are Turkey (67%) Italy (13%), Armenia (8%)

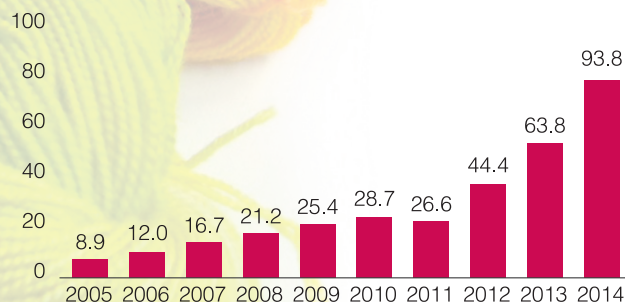

COMPETITIVE ADVANTAGES

- Availability of affordable and qualified workforce
- Proximity to markets and sourcing destinations with developed infrastructure and transportation systems
- Liberal business environment and preferential trade regimes with key regional markets
- Competitive utility costs
